

AI-First Software Developer

 UK | Full-time | Remote Working

At Sunrise, our purpose is simple: Helping IT Service Desks help everyone else.

Our vision is bold: To be the ITSM solution every business relies upon.

We solve the problem of IT service desks being held back by complex, costly tools - by giving them a solution they can rely on to help everyone else.

We're building the next generation of our platform using modern, cloud-native technologies and AI-first development practices. We're looking for a developer who codes differently - someone who has embraced AI as a core part of how they build, and who wants to ship real software at pace. If you want to be part of a company where your work makes a real difference, Sunrise is the place for you.

The role

We're hiring an AI-First Software Developer to help build the next generation of our platform. This isn't a role where you'll be maintaining legacy code or sitting in meetings all day. You'll be building real features, shipping working software, and shaping a product from the ground up. You'll work directly with our Product & AI Lead as part of a small, focused team.

What you'll do:

- ✓ Build features and modules for our next-generation ITSM platform.
- ✓ Use AI coding tools daily - Cursor, GitHub Copilot, Claude Code - as core development tools.
- ✓ Develop APIs and responsive web interfaces on modern Azure infrastructure.
- ✓ Help embed our Solvyr AI capabilities into the core platform.
- ✓ Contribute to technical and architectural decisions alongside experienced product and engineering leads.

 To apply, you must have the right to live and work in the UK.

The Sunrise Developer Mindset

Our developers live by four disciplines:

- **Builder** – You ship working software, because shipped beats perfect and our customers need solutions today.
- **Curious** – You're always learning new tools and approaches, because the way we build is changing fast.
- **Pragmatic** – You focus on outcomes over process, because the goal is working software in customers' hands.
- **Accountable** – You take ownership of what you build, because trust is earned by following things through.

Skills & Experience

We'd love to hear from you if you have:

- Demonstrable experience using AI coding tools (Cursor, GitHub Copilot, Claude Code) to build working applications.
- A portfolio or examples of projects you've built with AI assistance.
- Solid fundamentals in JavaScript/TypeScript, Python, or C#.
- Understanding of web technologies, REST APIs, and databases.
- Curiosity, hunger to learn, and a bias toward action.
- The ability to work independently while collaborating with a small team.
- The right to live and work in the UK.

Bonus points for: Azure experience (Functions, App Services, PostgreSQL, Entra ID), Docker or serverless patterns, authentication (OAuth/SSO/SAML), or any exposure to ITSM or workflow systems.

What you don't need: a computer science degree, ten years of enterprise experience, or expertise in legacy frameworks. We care about what you can build, not how you learned to build it.

Why Sunrise

- A purpose-driven company with a clear vision.
- A small team where your work matters and your ideas get heard.
- Competitive salary based on experience.
- Remote-first working - work from anywhere in the UK.
- Access to cutting-edge AI development tools.
- Mentorship from experienced technical and product leaders.
- A generous holiday allowance including your birthday off.
- Career growth as Sunrise continues to scale.

🔥 This is a role for developers who want to build at pace, work with the best AI tools available, and help shape a product from the ground up.

👉 Apply today and help us shape the future of ITSM. [Please email us a copy of your CV.](#)
